

ABSTRACT

5       An apparatus for measuring the optical characteristics  
of a colored liquid comprising a transparent plate (5) arranged  
horizontally, a sampling means (7) capable of collecting the  
colored liquid and dropping a collected colored liquid onto the  
transparent plate (5), and a measuring means (10) positioned  
beneath the transparent plate (5) for measuring the optical  
characteristics of the dropped colored liquid. This apparatus  
enables easy and accurate measurement of the optical  
10 characteristics of a colored liquid.
